IOT Hub to Power BI using azure streaming analytics :

Streaming pipeline steps :

1. Create IOT Hub service (captures input data)
2. Device IOT Data (data from device)
3. Live data (keep on getting data every 15 secs)
4. Processing streaming data (Azure Streaming Analytics)
5. Analyse the output

Create a IOT HUB Service :

The following features are optional and billed separately. Microsoft recommends enabling them to ensure the most robust protections and capabilities to secure and update your fleet of devices are available. [Learn more](#)

Device Update for IoT Hub

Device Update for IoT Hub is an additional service that enables you to deploy over-the-air updates for your IoT devices. You will be charged separately for this service. See [Azure pricing](#) for more details.

Enable Device Update for IoT Hub ☐

Defender for IoT

Microsoft Defender for IoT is a separate service which adds an extra layer of threat protection for Azure IoT Hub, IoT Edge, and your devices. You will be charged separately for this service. Defender for IoT may process and store your data within a different geographic location than your IoT Hub. [Learn more](#)

Enable Defender for IoT ☐ ₹0.083 per device per month
